

ABSTRACT

A child car seat (10) has a seat bottom (11) to be set on the seat of a vehicle, and a seat back (12) capable of turning relative to the seat bottom (11). Straps (40) having back end parts connected to an anchoring member (42) is extended along  
5 the bottom surface of the seat bottom (11). The length of parts of the straps (40) between the seat bottom (11) and the anchoring member (42) is adjusted by sliding a strap tightening device (41) along the straps (40). The strap tightening device (41) is engaged with a step (50) formed in the front end of the seat bottom  
10 (11) to hold the seat bottom (11) securely on the seat of a vehicle by the straps (40).
